INDIVIDUAL BOTTLE SALES

CLIC Sealing Cap. Available for all standard bottle neck sizes.

The VISO CLIC system gives you total control at all times over your valuable bottled drinks, be it champagne, fine wines or spirits. The coded sealing caps are available for all standard bottle neck sizes and are equipped with individual transponders.

One of the crucial development principles of Gruber Schanksysteme – **control at all times** – is impressively demonstrated by the VISO CLIC system.

You can check at any time which and how many bottles have been sold by each member of your staff. This means that the handover of stock levels is no longer necessary when the staff or the shift changes, because the stock levels are always up-to-date.

The versatility of the system is also demonstrated by the fact that the sealing caps can be used in either cooled or non-cooled areas and that the bottles can be stored either upright or lying down. Nothing stands in the way of you serving your fine bottled wines at the perfect temperature.

With over 500 different items, the system is also extremely flexible and can be smoothly integrated into your operating procedures.

Working in debit and/or credit mode is possible at all times. Your staff can see the current procedure on the designated VISO Display.

In strict credit mode, your staff can only open the appropriate bottle. All other sealing caps are locked and cannot be opened.
